

01 / A CONNECTED WORKSPACE

People, plans and place

An independent personal project for hospital volunteer coordination.
A visual tour of SHUORI 1.4.0, captured 10 October 2026 (JST). No organizational affiliation.

FIG. 1 Operations at a glance. A selected-day overview brings staffing, service activity, upcoming events and project progress into one coordination workspace.

FIG. 2 Explore the demonstration building. An exploded 3D view connects eight modeled levels with service locations; each floor can be opened for detailed inspection.

02 / VOLUNTEER RELATIONSHIPS

A profile with a history

Keep current coordination information alongside dated follow-ups, qualifications and milestones. Volunteer histories remain distinct from recorded service hours.

FIG. 3 Rich volunteer profiles. Contacts, programme status, skills, availability and readiness information support assignment decisions and individual follow-up. All displayed people are fictional.

FIG. 4 A dated record of support. Journal entries preserve training, conversations and recognition, with follow-up dates and optional links to scheduled events.

03 / FLEXIBLE INFORMATION

Records that fit the work

Extend the information model with typed fields, then record actual service explicitly. Saved definitions and values also accompany administrative Excel exports.

Customize records

Choose the information your team needs. Existing values stay available when a field is archived.

New custom field

Field label

Annual skills review date

FIG. 5 Configurable record fields. An unsaved date-field definition illustrates how coordinators extend records. Text, number, choice and yes/no fields are also supported.

Recorded hours
102.0
Within the current filters

Service interactions
673
Reported, non-unique interactions

Participating volunteers
12
With at least one activity record

Activity entries
41
One record per volunteer and shift

October 2026

All categories

All dates

Service activity log

Actual participation, linked to scheduled work

DATE	VOLUNTEER & SHIFT	CATEGORY	HOURS	INTERACTIONS	DETAILS
07 Oct 2026	Haruto Suzuki Morning welcome Synthetic service totals; no patient details.	Visitor guidance	3.0 h	13	
07 Oct 2026	Maya Chen Morning welcome Synthetic service totals; no patient details.	Visitor guidance	3.0 h	14	
07 Oct 2026	Kenji Mori Morning welcome Synthetic service totals; no patient details.	Visitor guidance	3.0 h	15	

FIG. 6 Account for completed service. Activity records connect volunteers and shifts with actual hours and service counts, providing an explicit basis for monthly reporting.

04 / EVENTS AND MEETINGS

An event becomes a workspace

Coordinate activities, training and meetings with configurable event types and linked modules. Participants, preparation and operational references stay with the event.

FIG. 7 A shared programme of events. Searchable events combine date ranges, status, type and ownership; selected records can be exported as an agenda.

FIG. 8 Meeting information in context. The configured platform and agenda stay with the event. This fictional example has no joining URL; meetings use external services.

05 / PREPARATION AND HANDOVER

Keep the details together

Place reports, shared-document links and preparation tasks where coordinators need them. Local uploads use authenticated access; external services retain their own permissions.

FIG. 9 Attach an event document. The file/link editor accepts local uploads or an existing HTTPS address; this capture shows an unsaved example.

FIG. 10 Preparation made visible. Completed and outstanding checklist items retain owners and due dates, making the next steps available within the event workspace.

06 / DAILY AND WEEKLY SCHEDULING

Make coverage readable

Examine assignments over time, then widen the view to coordinate the week.
Staffing suggestions and eligibility explanations support a coordinator’s review.

FIG. 11 The daily schedule. Time-based assignments make service coverage and unfilled work visible, with scheduled events available alongside volunteer shifts.

FIG. 12 A wider planning horizon. The weekly board groups activities by date, helping coordinators compare service commitments before assigning or adjusting work.

07 / DELIVERY AND REFLECTION

From dependencies to outcomes

Connect project preparation with operational delivery and recorded service results.
Planning measures and actual activity remain distinguishable throughout the workspace.

FIG. 13 A project plan with dependencies. Task timing, progress and calculated critical-path information expose the activities that constrain the plan’s completion.

FIG. 14 Review the month. Service hours, participation and category trends summarize saved activity records and support monthly reports and recognition planning.

08 / DETAILED SPATIAL PLANNING

A model you can inspect

Explore independently modeled furnishings, equipment, signs and volunteer figures. Illustrative geometry provides a setting for discussion and layout studies.

FIG. 15 Inside a modeled service space. Shelves with individual book spines, desks, screens and trolleys make the library tangible; selection reveals object information and transforms.

FIG. 16 An original asset library. Fifteen procedural furnishing and equipment types can populate a floor study; each placed asset remains independently selectable.

09 / INTERACTION AND REHEARSAL

Arrange, inspect, rehearse

Save layout studies and assignment-linked routes as named spatial scenarios.

Rehearsal animation illustrates a plan; it does not represent live tracking or validated navigation.

FIG. 17 Inspect and position individual objects. Selection connects a model object to its information and transform controls; editable furnishings can be moved or rotated.

FIG. 18 Draft a volunteer rehearsal route. Four unsaved waypoints connect a scheduled person to a schematic floor path. Routes do not detect obstacles or verify access.

10 / DOCUMENTS FOR COORDINATION

Turn a plan into a handout

Preview and export volunteer timelines, station coverage, weekly rosters, agendas and event briefs. Choose PDF or editable Excel, with A4 and A3 layouts.

FIG. 19 An export studio for operational views. Date, time and status controls define the saved-data scope; a preview supports review before downloading.

FIG. 20 Prepare a readable event brief. Export event details, preparation, participants and linked operational information, with coordination notes and custom fields available by choice.

Provenance. Demo floor geometry was independently reconstructed from the [University of Tokyo Hospital's public floor-guide maps](#), with invented furnishings and routes. It is illustrative, not official, surveyed or suitable for navigation. No hospital or organizational affiliation is implied.
